Decision summary — SheetSpeed pilot

For a manager or budget owner. Fill the bracketed blanks, then forward. About 60–90 seconds. Light branding only. Prepared with the SheetSpeed trust pack. Not a vendor pitch deck.

The problem and its cost. We use Google Sheets, Docs and Slides, but our team still thinks in Excel shortcuts. We currently spend time on menus and workarounds [and, if applicable, $____ per year on _____]. Leaving that as-is costs us [describe in one line: delayed models, extra clicks, a paid add-on, training time].

The request. Approve a **free, 30-day pilot** of SheetSpeed, a Chrome extension that adds Excel, Word and PowerPoint Alt shortcuts to Google Sheets, Docs and Slides, for [N] people in a pilot group, with a go/no-go on [date].

What it is, in plain language. People keep the keyboard habits they already have. Core shortcuts run in the browser and do not need a Google API connection. Optional Pro tools talk to Google from the browser only after a user consents. Spreadsheet content is not sent to a SheetSpeed server.

Cost. $0 during the vendor's early access, and $0 for this pilot. Nobody is charged unless we later start a paid plan. After billing opens, published prices are $7.99/month, $69/year, or $149 lifetime. A filled business case with **our** numbers is attached or at the trust link below. Hours saved, if we show them, are a **soft estimate**, not a hard cost reduction.

Key risk and mitigation. The vendor does **not** have a SOC 2 report (or ISO 27001, or a penetration-test report). Mitigations: no SheetSpeed server holds our workbooks; Core needs no Google API access; permissions are limited to Google document pages and listed Google APIs; IT can pilot on a small OU and roll back by blocking the extension (Store ID `ljlmgielacploapelnjhodicgbjipcaa`). Refresh from Sheets is off by default and briefly link-shares a temporary Drive image if a user opts in; an administrator can force it off with the `slidesLinkShare` policy.

Action asked, and by when. Please approve the pilot and name the owner for IT review by [date]. Security and procurement can start **in parallel**, not after the pilot. Packet: https://sheetspeed.agi-jarvis.com/trust/
